2005 Statewide Deer Harvest Summary

Though not as bountiful as 2004, Tennessee deer hunters had another strong year in 2005 harvesting 166,071 animals. This number was approximately 14,000 deer fewer than the previous year, representing an approximate 8% drop in harvest. There were many factors contributing to this decline; however, none of them represent a long-term concern for the TWRA.

“Factors such as a bountiful mast crop and extreme weather conditions on opening day can have dramatic yearly effects but usually aren’t sustained over long periods of time. Although there was a dip in harvest from the

previous year, you have to remember we still had the second highest harvest of all-time,” said Daryl Ratajczak, TWRA’s Big Game Coordinator. “You also have to understand that the Tennessee deer harvest can’t keep increasing indefinitely. There has to be a time where we level off and there are good indications that we are finally reaching that point,” he added.

As expected Unit L led the way accounting for 53% of the harvest. This was followed by Unit A with 34%, and by Unit B with 13%. A complete unit-wide breakdown can be seen below:

2004/2005 Harvest Comparison

Unit	2004 # of Bucks	2004 # of Does	2004 Total Deer	2004 % Does	2005 # of Bucks	2005 # of Does	2005 Total Deer	2005 % Does	2004/2005 Difference
Unit A	39,557	26,943	66,500	40.5%	33,011	21,104	54,115	39.0%	-12,385
Unit B	14,607	6,830	21,437	34.2%	15,391	6,205	21,596	28.7%	+159
Unit L	42,432	43,708	86,140	50.7%	43,351	41,068	84,419	48.6%	-1,721

2005 Statewide Totals					95,063	71,008	166,071	42.8%	

Awe Nuts!

As previously mentioned, there was excellent mast production throughout the entire state in 2005. In other words, come deer season, there were nuts everywhere! From white oaks to red oaks to hickories, most mast-bearing trees had an above average mast output. This meant great things for forest dwelling creatures which are dependant on hard mast as a fall food source; however, this translated to hard hunting for most Tennessee deer hunters.

With so many nuts on the ground, the deer did not have to travel as far to meet their daily nutritional needs. They could stay in the cover of the woods and eat acorns from dawn until dusk. It became much more difficult for the average hunter to pattern deer since they were not

using their traditional feeding routes or utilizing food plots as frequently as they have in years past.

What made the 2005 mast year unique was that the mast production literally boomed from the Mississippi River all the way to the Smoky Mountains. There were hardly any areas at all that reported poor mast production. Typically, on any given year, some areas produce well while other areas don’t. This gets animals moving and when animals move, they’re easier to harvest. Although the bountiful mast might have made things difficult in 2005, look for some awesome deer to come out of the 2006 deer season.

2006 Deer Outlook

With a well-balanced deer herd, an advanced buck age structure, and last year’s tremendous mast crop, we can’t help but predict great things for 2006. As long as Tennessee deer hunters continue to harvest does at every oppor-

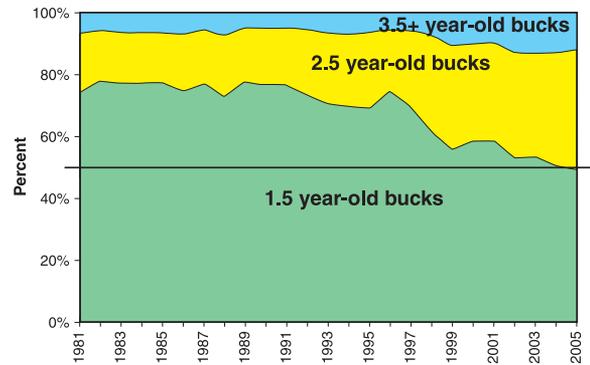

tunity and exercise trigger finger restraint by passing up younger bucks, there will always be the possibility that the deer you are after is looming around the next tree.

Tennessee Bucks Still Growing Old

Today, Tennessee's deer herd ranks right up there with deer herds from other more popular trophy states. In fact, if you harvested a buck in Tennessee last year, odds were that it was an older aged-class deer. Even with Tennessee's liberal bag limits, the buck age structure continues to impress with more than half of all harvested bucks being 2½ years of age or older.

If you compare the harvest of older aged-class bucks between Tennessee and Kentucky, which has a one-buck limit, it's obvious that Tennessee's regulations are not hurting the production of older aged-class deer. The main difference between the two states is that Tennessee continuously harvests more older aged-class deer than its northern counterpart. Tennessee's excellent buck age structure is a testament to the Tennessee deer hunter for voluntarily passing up the younger bucks.

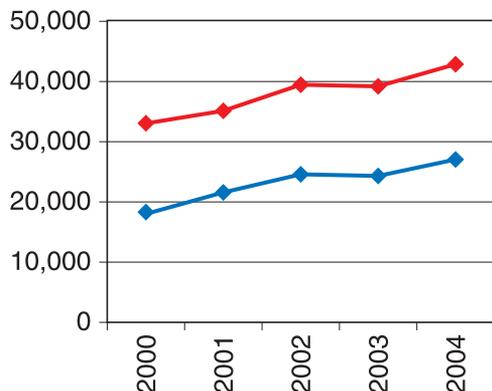

Tennessee Adult Buck Harvest (Age Structure)

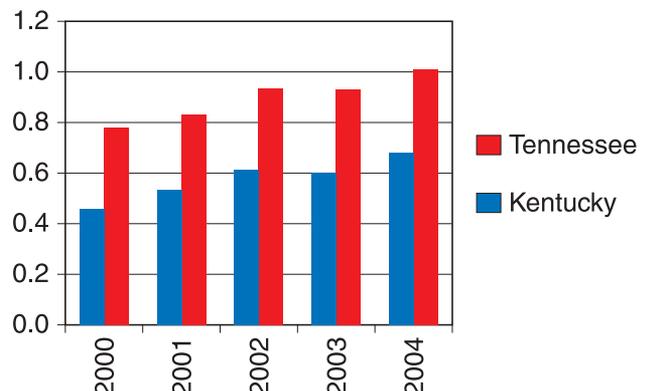

Adult Buck Harvest – Tennessee vs. Kentucky Comparison

(All numbers are derived from data and statistics obtained from each respective wildlife agency.)

Number of 2-1/2 + deer in harvest

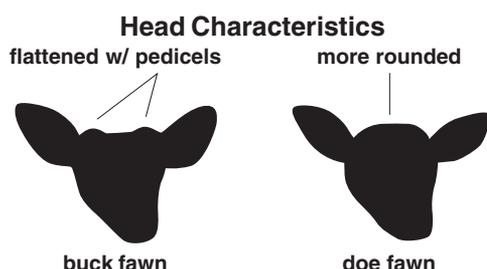

Number of 2-1/2 deer harvested per mi²

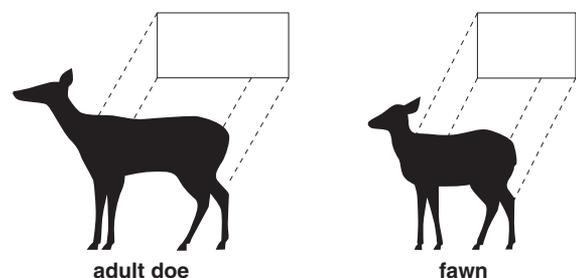

Know the Difference

If one of your concerns is accidentally harvesting a button buck (male fawn) instead of a doe, then know the difference between the two.

- Wait until the deer are standing or moving slowly. It is easier to identify sex and age when the deer are not running or moving fast.
- Look at the body shapes to the right. Adult does are different from juvenile deer. The mature doe is more rectangular with a long neck and face. Fawns are more square-shaped and have a short neck and face.

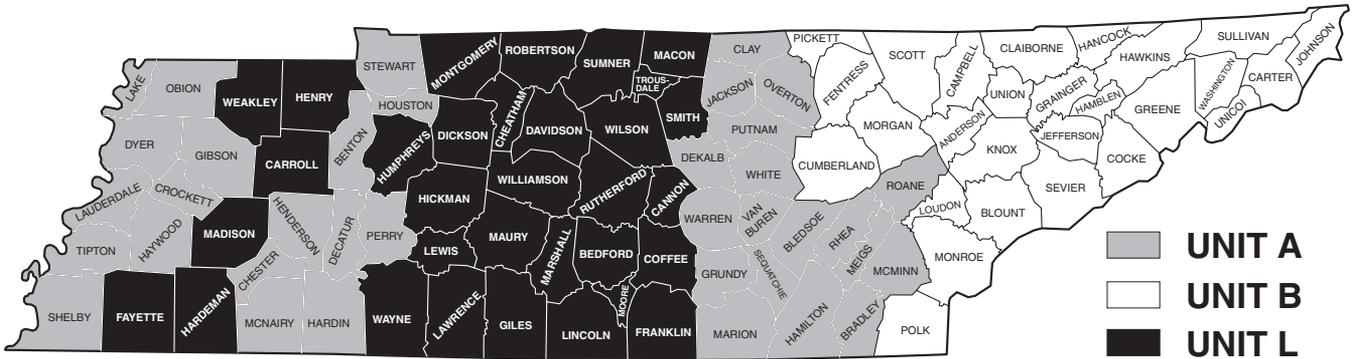

Body Characteristics

- Wait until several deer are together; then harvest one of the larger antlerless deer.
- Look at the head silhouettes to the left. A doe's head normally is more rounded on top between the ears because a buck's head is flattened by the base of the antlers.
- Shoot with good visibility. Poor light or heavy cover make it difficult to determine sex and age.

Remember, all Tennessee hunters are different. What may be a small deer to you may be a trophy to someone else.

DEER HUNTING

WHITE-TAILED DEER HUNTING UNITS AND BAG LIMITS

For better wildlife management, Tennessee is divided into three deer units.

- The statewide bag limit for antlered bucks is three (3), except a hunter may take no more than two (2) antlered bucks from Unit B.
- No more than 1 antlered deer may be taken per day.
- The only way the bag limit of three (3) antlered bucks may be exceeded is:
 - a) if bucks are taken on TWRA managed hunts where bucks are noted as bonus deer (see WMA listings beginning on page 27).
 - b) if bucks are taken on NWR or other federally managed hunts where the bucks are noted as bonus deer. Contact those areas for specific regulations. (Listings on page 55.)

UNIT A SEASONS AND BAG LIMITS

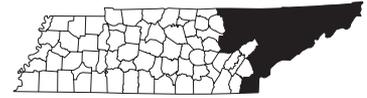

Unit A includes the following counties: Benton, Bledsoe, Bradley, Chester, Clay, Crockett, Decatur, DeKalb, Dyer, Gibson, Grundy, Hamilton, Hardin, Haywood, Henderson, Houston, Jackson, Lake, Lauderdale, Marion, McMinn, McNairy, Meigs, Obion, Overton, Perry, Putnam, Rhea, Roane, Sequatchie, Shelby, Stewart, Tipton, Van Buren, Warren, White.

Season Type	Season Dates	Antlered Bag Limit	Antlerless Bag Limit
Archery (includes crossbows)	Sep. 23 - Oct. 27, 2006 Oct. 30 - Nov. 3, 2006 Nov. 11 - Nov. 17, 2006 Dec. 11 - Dec. 15, 2006	2	4
Muzzleloader and Archery	Nov. 4 - Nov. 10, 2006	1	4
	Dec. 4 - Dec. 10, 2006	1	
Gun, Muzzleloader and Archery	Nov. 18 - Dec. 3, 2006 Dec. 16, 2006 - Jan. 7, 2007	2	See Quota Hunt Table (pg. 16) for antlerless hunts.
Young Sportsman**	Oct. 28 - Oct. 29, 2006	1	2
	Jan. 13 - Jan. 14, 2007	1	2

** Youths 6-16 years of age only. Each young sportsman must be accompanied by a non-hunting adult, 21 years of age or older, who must remain in a position to take immediate control of the hunting device and who must also comply with fluorescent orange regulations, as specified for legal hunters. Youths 10 years of age or older must meet Hunter Education requirements.

THE STATEWIDE BUCK BAG LIMIT IS THREE ANTLERED DEER.

UNIT B SEASONS AND BAG LIMITS

Unit B includes the following counties: Anderson, Blount, Campbell, Carter, Claiborne, Cocke, Cumberland, Fentress, Grainger, Greene, Hamblen, Hancock, Hawkins, Jefferson, Johnson, Knox, Loudon, Monroe, Morgan, Pickett, Polk, Scott, Sevier, Sullivan, Unicoi, Union, Washington.

Season Type	Season Dates	Bag Limits
Archery (includes crossbows)	Sep. 23 - Oct. 27, 2006 Oct. 30 - Nov. 3, 2006 Nov. 11 - Nov. 17, 2006	2 deer, either sex
Muzzleloader and Archery	Nov. 4 - Nov. 10, 2006	1 deer, antlered only. This deer may be either sex Nov. 4-6.
	Dec. 8 - Dec. 10, 2006	1 deer, antlered only
Gun, Muzzleloader and Archery	Nov. 18 - Nov. 26, 2006 Dec. 16, 2006 - Jan. 3, 2007	2 deer, antlered only See Quota Hunt Table (pg. 16) for antlerless hunts.
Young Sportsman**	Oct. 28 - Oct. 29, 2006	1 deer, either sex
	Jan. 13 - Jan. 14, 2007	1 deer, either sex

** Youths 6-16 years of age only. Each young sportsman must be accompanied by a non-hunting adult, 21 years of age or older, who must remain in a position to take immediate control of the hunting device and who must also comply with fluorescent orange regulations, as specified for legal hunters. Youths 10 years of age or older must meet Hunter Education requirements.

UNIT L SEASONS AND BAG LIMITS

Unit L includes the following counties: Bedford, Cannon, Carroll, Cheatham, Coffee, Davidson, Dickson, Fayette, Franklin, Giles, Hardeman, Henry, Hickman, Humphreys, Lawrence, Lewis, Lincoln, Macon, Madison, Marshall, Maury, Montgomery, Moore, Robertson, Rutherford, Smith, Sumner, Trousdale, Wayne, Weakly, Williamson, Wilson.

Season Type	Season Dates	Antlered Bag Limit	Antlerless Bag Limit
Archery (includes crossbows)	Sep. 23 - Oct. 27, 2006 Oct. 30 - Nov. 3, 2006 Nov. 11 - Nov. 17, 2006 Dec. 11 - Dec. 15, 2006	2	3/day
Muzzleloader and Archery	Nov. 4 - Nov. 10, 2006 Dec. 4 - Dec. 10, 2006	2	3/day
Gun, Muzzleloader and Archery	Nov. 18 - Dec. 3, 2006 Dec. 16, 2006 - Jan. 7, 2007	2	3/day* Type 94 permit required.
Young Sportsman**	Oct. 28 - Oct. 29, 2006	1	2
	Jan. 13 - Jan. 14, 2007	1	2

* A Type 94 permit is required to hunt antlerless deer during this season except for landowners hunting under the landowner exemption, Sportsman and Lifetime Sportsman license holders, and hunters who possess a Type 167 permit.

** Youths 6-16 years of age only. Each young sportsman must be accompanied by a non-hunting adult, 21 years of age or older, who must remain in a position to take immediate control of the hunting device and who must also comply with fluorescent orange regulations, as specified for legal hunters. Youths 10 years of age or older must meet Hunter Education requirements.

NO MORE THAN TWO ANTLERED DEER MAY BE TAKEN IN UNIT B.

SPECIAL SEASON ANTLERLESS ONLY DEER HUNTS

See chart on page 16. The following counties and portions of counties are open to antlerless deer hunting during the regular gun season as specified. **Most WMAs are closed during these hunts. Refer to specific WMA listings for open dates.**

Quota Hunts – Special quota permit required, except for landowners hunting under the landowner exemption (see page 4). Bag limit, one antlerless deer per permit except where specified. **Note:** *Blount and Knox counties allow a bag limit of two deer per permit. Houston and Stewart allow a bag limit of three deer per permit.*

Non-quota Hunts – No hunter quota but a Type 94 permit or Sportsman License is required except for landowners hunting on their own land, Sportsman and Lifetime Sportsman license holders, and hunters who possess a Type 167 permit.

HOW TO APPLY FOR SPECIAL SEASON QUOTA HUNTS PERMITS

You can obtain an instruction sheet at any TWRA license agent, TWRA regional office, or online at www.tnwildlife.org. The applications can only be processed by TWRA license agents, personnel at a TWRA regional office, or online at www.tnwildlife.org. If applying in person, remain until your application is processed to verify that the information is correct and to receive your receipt with your confirmation number. **DO NOT MAIL THE INSTRUCTION SHEET.** If you have questions, call 615-781-6621 during regular business hours (8:00 a.m.–4:30 p.m. CST). You may begin applying on July 5, 2006. The deadline is September 6, 2006. A computer drawing will be conducted to determine successful applicants. Permits are nontransferable and hunt dates may not be changed. Vacancy permits, if any, will be announced and sold on a first come, first served basis by TWRA license agents or online at www.tnwildlife.org. **Remember, public land is not available in all counties.** Persons with a quota hunt permit must obtain permission from the appropriate landowner before hunting.

DEER HUNTING Q & A

Q: If I'm bow hunting in Unit A only, how many deer may I take during the archery season?

A: You may take two bucks and four does.

Q: I have a week's vacation planned for November 4-10. I plan to hunt with my muzzleloader in both Unit L and Unit B. How many bucks may I take?

A: You may take up to three antlered bucks during this time, two may come from Unit L and one may come from Unit B. Remember, once you have harvested your third buck, you have reached the statewide limit. Therefore, your remaining buck harvest will be limited to "bonus" deer listed on WMA or NWR hunts. (See Regional WMAs beginning on page 27.)

Q: If I'm driving home in my pickup truck and I see a deer on my farm, can I shoot from the cab as long as I pull off the public right of way?

A: No, you may not hunt from any vehicle that can be legally registered for use on a Tennessee highway.

Q: Can a landowner take two limits of does during county quota hunts?

A: Yes. A landowner may take one limit under the landowner exemption and a second limit if drawn for a quota permit.

Q: Can a landowner take two limits of does during a nonquota county hunt?

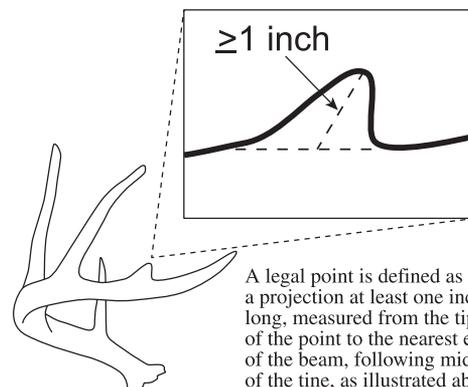

A: No. A landowner may take what is allowed without a Type 094, under the landowner exemption, but may not purchase a Type 094 and take a second limit.

Q: Now that the .24 caliber restriction has been lifted for hunting big game, can I use my .22 rifle for hunting deer?

A: Only if it is a centerfire rifle, like a 22-250. A rimfire .22 is still illegal to use for big game.

(See page 18 for Spring Turkey Q&A.)

Sampling format - minimum sample of 50 per county (including WMA's)
 - minimum sample of 75 per county that have vulnerable captive cervids
 - minimum of 75 per county in the elk restoration zone
 - other sample sizes based on % of unit population within each county if higher than the minimum

* The Plateau Region is designated as the Elk Restoration Zone. A minimum of 50 CWD samples will be collected from this area annually.

THE CWD PROJECT

The purpose of this project is to determine if Chronic Wasting disease (CWD) occurs in wild populations of deer and elk in Tennessee. Currently, we have no evidence that CWD has entered Tennessee. The absence of CWD will enable us to maintain healthy populations of deer and elk. If CWD is detected in Tennessee, we will determine its prevalence and distribution and implement plans to minimize its spread, inform the public about its impacts, and develop plans to reduce and/or eliminate its presence.

CWD BACKGROUND

The origin of CWD is unknown. It was first recognized as a syndrome in captive mule deer held in wildlife research facilities in Colorado in the 1960s, but it was not identified as a transmissible spongiform encephalopathy (TSE) until the 1970s. CWD is distinctly different from other TSEs, which include Creutzfeldt-Jakob Disease of humans, scrapie of sheep and goats, and bovine spongiform encephalopathy, also known as mad cow disease. CWD occurs naturally only in cervids (specifically elk, red deer, white-tailed and mule deer.) and currently there is no evidence that CWD poses a risk for humans or domestic animals. However, public health officials recommend that human exposure to the CWD agent be avoided as they continue to evaluate any potential risk.

TENNESSEE HARD MAST SURVEY

BACKGROUND:

Tennessee's hard mast survey was developed in the 1960's for the evaluation of mast yields on a statewide basis. The technique is a relatively efficient and economical survey that provides quantifiable data on a large number of mast producing trees in a variety of habitats in Tennessee. Evaluation of mast abundance on an annual basis allows wildlife managers to make educated determinations of the condition of various game species. Hard mast data are also useful in interpreting changes in certain conditional parameters of some species; e.g. changes in body weights and antler characteristics (beam diameter, no. of points, etc.) of yearling buck deer may be related to hard mast abundance.

The value of hard mast to wildlife species, both game and nongame, is unquestioned. Hard mast is especially important to wildlife species in areas where there are little or no alternative food sources. Reproduction in black bears in the Southern Appalachians appears to be closely related to acorn abundance. Research on white-tailed deer in the Appalachians has demonstrated that acorn abundance significantly influences body weights, antler size, and productivity of deer. Furthermore, acorn abundance is critical to the welfare of wild hog populations. Following years of mast scarcity, hogs suffer from lowered reproductive potential and increased mortality rates.

When completed surveys are received from the field, they will be compiled, entered onto a computerized database, and analyzed. Survey results are published each year in the Big Game Harvest Data Report. Index values range from 0.0 to 10.0, with the following quality ratings assigned to the corresponding index:

Index	Quality Rating
0.0–2.5	Poor
2.6–4.5	Fair
4.6–6.5	Medium
6.6–8.5	Good
8.6–10.0	Excellent

It follows that these mast quality values are correct only when sufficient quantities of mast producing trees occur in the forest. For example, excellent acorn production on a dozen or so 1.5" dbh blackjack oaks per acre in a 1,000 acre pine plantation would not meet the criteria in the definition of "excellent" above. However, six 12" dbh blackjack oaks per acre or 6,000 in the 1,000-acre plantation would meet the criteria for "excellent" mast production. A "rule of thumb" must be applied to quality values for accurate interpretation: "Value definitions can be applied when at least nine 10" dbh oak trees per acre are present, or six 13" oaks, five 14" oaks, four 16" oaks, or three 18+" oaks, or any combination of diameter classes approximating five square feet of basal area per acre.

SURVEY ROUTES:

The emphasis of the routes will be to collect data on our WMA's where we are intensively managing wildlife populations, and to fill in with enough county routes to provide a statistically valid sample that will be used to compare the mast abundance in the various physiographic regions of the state. Physiographic regions were chosen as an analysis unit because of basic differences in predominant tree species and overall species composition, and differences in soil classifications and productivity. The designated survey routes are outlined below.

If land use and habitat changes occur along established survey routes, wildlife officers and regional biologists should meet and determine the best route to survey in their respective counties. Once a new route is agreed upon, it should be mapped out on a county map. A copy of this map with the route and stops marked on it should be sent in with the survey forms at the completion of the survey.

QUANTITY OF DATA EXPECTED:

Currently there are six different groups of mast producing trees sampled in the mast survey. These groups are sampled at various levels in each area. The following guidelines represent the desired sample size for each species group:

Species Group	Desired Sample
White Oaks	25
Red Oaks	25
Hickories	15
Walnut	15 for these 3 groups
Beech	
Pecan	
Total	80

In some areas one or more of these specie groups may be less prevalent. Sample size can be adjusted accordingly. However, the oaks and hickories should be sampled the most intensively since they are generally the most important to wildlife.

HARD MAST SURVEY ROUTES: PHYSIOGRAPHIC REGION:

- 1) **MISSISSIPPI RIVER**
 - Counties - None
 - WMA's - Reelfoot, Anderson-Tully, Shelby Forest, Moss Island, Ernest Rice
- 2) **GULF COASTAL PLAIN**
 - Counties - Fayette, Haywood, Henry/Weakley
 - WMA's - Natchez Trace, Gooch, White Oak, Chickasaw, Milan Arsenal
- 3) **WESTERN VALLEY**
 - Counties - Benton, Hardin, Decatur
 - WMA's - Camden, West Sandy
- 4) **W. HIGHLAND RIM**
 - Counties - Hickman, Humphreys, Montgomery, Robertson, Giles
 - WMA's - Land Between the Lakes, Cheatham, Eagle Creek, Laurel Hill
- 5) **CENTRAL BASIN**
 - Counties - Wilson, Smith, Williamson, Cannon, Lincoln
 - WMA's - Cumberland Springs, Cordell Hull
- 6) **E. HIGHLAND RIM**
 - Counties - Putnam, Clay, Warren, White
 - WMA's - AEDC WMA
- 7) **CUMBERLAND PLATEAU**
 - Counties - Scott (Big South Fork NRA), Grundy, Bledsoe, Franklin
 - WMA's - Catoosa, Prentice Cooper, Royal Blue WMA/Campbell Co.
- 8) **RIDGE AND VALLEY**
 - Counties - Grainger, Meigs, Hamblen,
 - WMA's - Oak Ridge, Chuck Swan,
- 9) **UNAKA MOUNTAINS**
 - Counties - Cocke, Greene, Carter, Johnson
 - WMA's - Tellico District of Cherokee, Ocoee District of Cherokee, GSMNP

Black Bear Bait Station Index 1981-2006

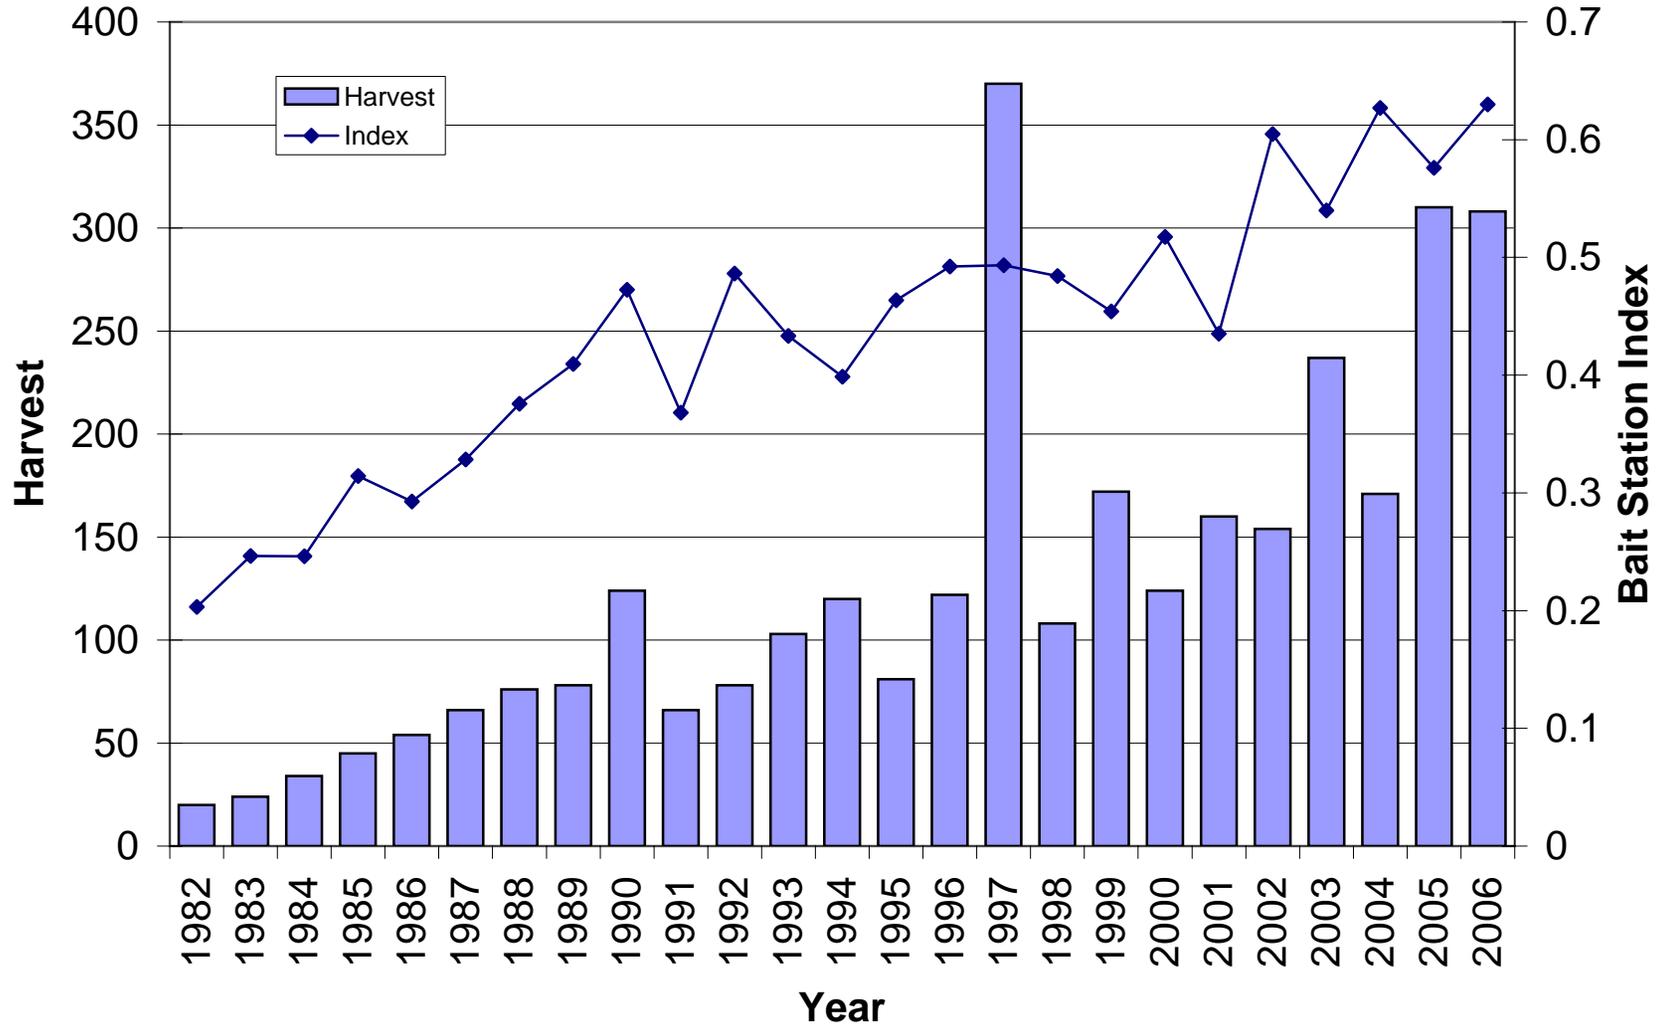

Bait Station Indices

Black bear populations are difficult to estimate with precision because bears are secretive animals that range over wide areas, and exist in relatively low densities. Research conducted in the Great Smoky Mountains National Park (GSMNP) during the 1970's suggested that bait station indices provide reasonable estimates of fluctuation in bear populations from year to year. Bait station surveys have been conducted in Tennessee (outside of GSMNP) on a systematic basis since 1981. In 1983, the area sampled in the southern Appalachians was expanded to include over 2,000,000 acres in Tennessee, Georgia, and North Carolina. In addition, these or similar type indices are being conducted in a number of other states in the U.S. in an attempt to monitor their bear populations trends over time. The black bear is a fragile wildlife resource in Tennessee, dictating that we continue to monitor bear populations in as practical and effective manner as possible. The bait station survey presently provides the most accurate and efficient means for obtaining this critical data on population trends.

The bait station index refers to the percentage of bait stations that were visited by black bears during a designated baiting period. They are used to monitor annual trends in black bear populations which can be used for establishing hunting seasons. The index may also be used for distributional and activity data in relation to bear sanctuaries and hunted areas, elevation, roads, habitat types, weather and land use patterns. Absolute density estimates may eventually be possible by using the index values and population estimates established in other areas, such as the Great Smoky Mountains National Park.

In 2000, the state of Tennessee classified wild boar as any wild hog killed on Catoosa, Cove Mountain, Foothills, or South Cherokee Wildlife Management Area (WMA). These animals have specific hunting seasons and are required to be checked-in as a big game animals. All other wild hogs in the state of Tennessee are considered feral hogs and can be hunted year round on private lands and they are not required to be checked-in. Those animals that have been checked-in in counties containing the above mentioned WMA's have been deemed wild boar and placed in their respective WMA.
